

Image preparation for the template A_TypeA.html

A) On the RX tag :

- ④ Then you will have 've2ser_received.jpg' file in the images_Z folder at your qsl.net server.

B) On the TX2 tag :

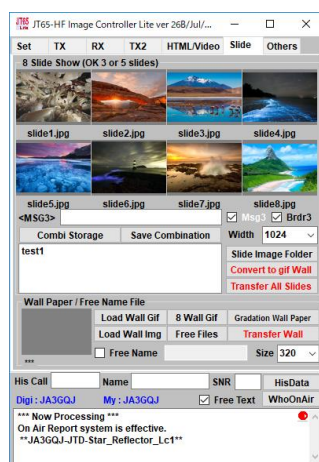

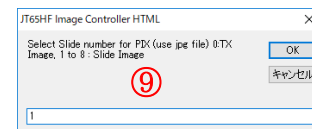

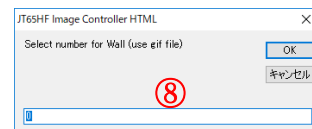

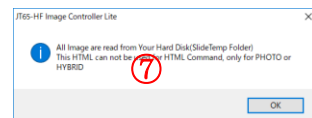

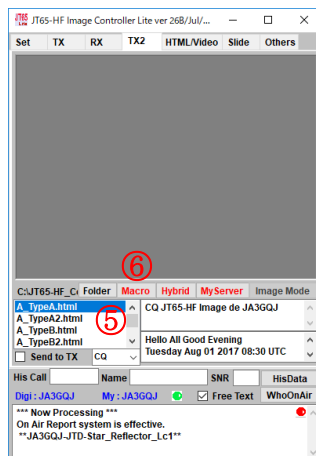

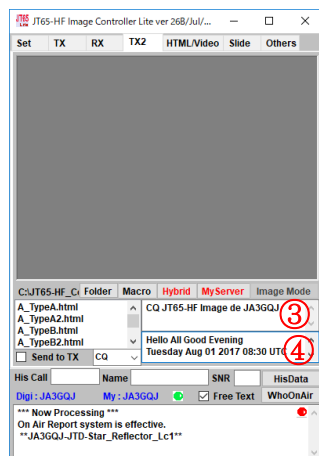

Clock ① in the above left figure

Then you will have ② in the above right figure.

If you select 'CQ' then you will have message ③④ as like as next page left figure.

Then you select the template A_TypeA.html ⑤ then click Macro ⑥.

Then you will have small popup screen ⑦⑧⑨ in order by click OK button.

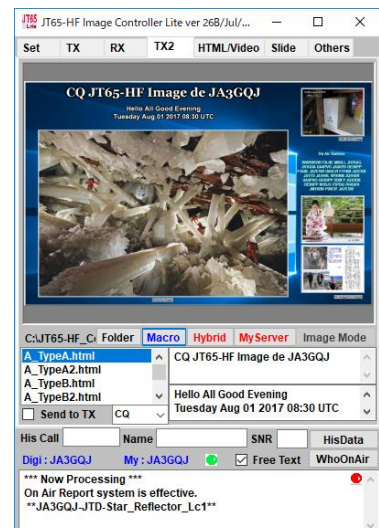

Default is OK for the time being at the ⑧ in the above left figure,

The TX image 1 to 8 at the ⑨ in the above left figure are prepared at Slide tag (left figure)

You will have large popup TX image after click OK button on ⑨ in the above left figure then the TX image show in the TX2 tag screen. This means that the preparation of the TX image is complete. (following figure)

Then you come to the VariFront and click CMD to send image.

We were thinking only about using Html / Video tag, but using TX2 tag seems to be faster. However, even if you use Html / Video tag, the above procedure is necessary.
